

A B S T R A C T

A disposable undergarment includes liquid-impervious skin-contactable sheets actually having a pair of belt-like strips spaced apart from and opposed to each other in a transverse direction of an undergarment and extending in a longitudinal direction of the undergarment along transversely opposite side edge portions of the undergarment. The skin-contactable sheets are attached to a skin-contactable surface of the undergarment so as to cover a panel. The skin-contactable sheets have fixed surface areas secured to longitudinally opposite end portions of the undergarment and free surface areas adapted to be spaced upward from the panel so that the skin-contactable surface may be partially surfaced between these skin-contactable sheets.
